DETAILED ACTION

Drawings

Figures 8-12 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

Claim 1 is objected to because of the following informalities: the voltage measurement **means** should be changed to **unit**. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in this instant application in view of Bylsma et al. (US6255707).

With respect to claims 1 and 5-6, the prior art shows in Fig. 11 a solid state laser diode comprising a laser diode 1, a constant current source 10 for supplying a constant current to the diode 1, and a detection unit 18. The prior art does not disclose a voltage measurement unit. Bylsma teach a voltage measurement unit 110 in Fig. 5. For the benefit of measuring the voltage of the laser diode, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the prior art a voltage measurement unit as taught by Bylsma.

With respect to claims 2-4, the prior art shows in Fig. 8 and 11 a plurality of laser diodes 1 connected in series for exciting a laser medium 2, a constant current source 10, and a detection unit 18. The prior art does not disclose a voltage measurement unit. Bylsma teach a voltage measurement unit 110 in Fig. 5. For the benefit of measuring the voltage of the laser diodes connected in series, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the prior art a voltage measurement unit as taught by Bylsma.
